

# What's New

**BizInt Smart Charts for Patents 3.3** was released in October 2007. This document describes features added to BizInt Smart Charts over the past 12-18 months.

### Create patents reports combining information from...

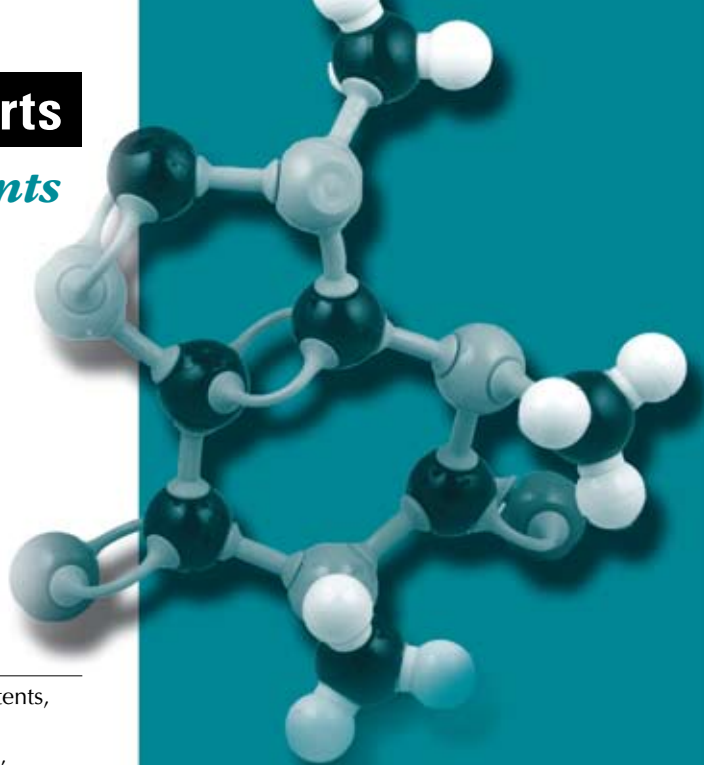

#### these hosts...

#### and these databases.

STN	Derwent World Patents Index & WPI FirstView, Claims US Patents, Chemical Abstracts, MARPAT, REGISTRY, US Patents Fulltext, USPAT2, PCTFull, EPFull, JAPIO, EMBASE, MEDLINE, BIOSIS, COMPENDEX, PROMT, SciSearch, PASCAL, KOSMET, INSPEC, METADEX, TULSA, RAPRA, CANCERLIT, IPA, KOREAPAT, FEDRIP, FSTA, FROSTI, AGRICOLA, Derwent Drug File and USGENE.
Questel	FAMPAT, PLUSPAT, Derwent World Patents Index, API/Derwent Merged File, US and EP (apps and pats), and PCTFULL. (Use the Full XML export from QPAT, Orbit.com, Qweb, and PatentExaminer)
Dialog	Derwent World Patents Index & WPI FirstView, Claims US Patents, US Patents Fulltext, EMBASE, MEDLINE, BIOSIS, SciSearch, FedRIP. (Use TAG format; see website for more details)
MicroPatent	PatSearch FullText and MPI-INPADOC (no images)
Delphion	Use XML from Delphion Data Extract.
SciFinder	CAplus and MEDLINE; export "Tagged Text".
Thomson	Thomson Pharma patents (IP) and Thomson Pharma Partnering (IDdb), using the BizInt export.
Integrity	Prous Integrity Patents, using the BizInt export.
GenomeQuest	GQPAT and Geneseq, using the "XML for BizInt Smart Charts" export option.
Minesoft	PatBase and PatentArchive, using the BizInt Smart Charts Data File export.
Elsevier	EnCompassPAT from the Ei EnCompass website

### Identify Common Patent Family

- **Tools | Identify Common Patent Family** looks at all members of patent families across different records and databases and creates a **"Common Family" column** with a single key patent number. Sorting by this column will help you identify related patents.
- **Row shading based on sort values:** You can specify on the File|Page Setup panel (and using a check box on the Sort panel) to have row shading change each time the primary sort value changes. For example, row shading can change every time the Common Patent Family changes to draw your attention to related patents.

## Links to Full Text Patents in HTML export

- **Create links from patent numbers** (US, EP, WO, GB, FR) in the Patent Family or Basic Patent Number to full patent documents on Delphion, MicroPatent, Minesoft (PatentOrder, Patbase Express family view, PatentOrder Direct PDF access), esp@cenet, and USPTO. The links will appear in exported HTML reports.
1. Use View | Column Properties to select for a column, AND
  2. Choose which host you want to use for each authority under Options | Full Text Patent Links.

## Combined & Updated Charts

3.3 features are described in the “Combining and Updating Reports” handout found on the “Tips for Using BizInt Smart Charts” page at: <http://www.bizcharts.com/support/use/>

- **Row Status:** when two charts are combined or updated a **Row Status column** is created showing the status of rows in the new chart.
- **Color code changed cells:** Use the View | Color Code Changed Cells command to see the update status of rows and cells. Updated cells—cells where the new value is different from the old value—are color coded in blue.
- **Updating user comments:** Text in user-added columns with the exact same column title is preserved in combined charts. The word “/Also:” indicates different values—a technique for merging comments from multiple users.

## Enhanced support for gene sequence databases

- **GenomeQuest:** Added support for both Nucleotide and Protein data from GQPat and Geneseq collections in 3.3.14 (8/2/09). Added support for the full list of patent family members; the publication date of the basic member is extracted and presented in the Patent Family.
- **USGENE:** Added support on STN in 3.3.18 (2010-02-08). Results from BLAST and GETSIM searches are supported. Include ALIGN in your display format.
- Change font in Alignment and Sequence columns to a fixed width font (e.g. Courier New)

## Patents database and host enhancements

- **Questel:** Use the Full XML export for QPAT, Orbit.com and Qweb (Version 3.3.9 (5/25/08), PatentExaminer (Version 3.3.15 (10/10/09)). Added support for US and EP (applications and patents), and PCTFULL.
- **Minesoft:** Added support for Patent Archive and custom Inspection Fields in 3.3.12 (3/6/09). Inspection data will appear in user-added columns in the chart.
- **IDdb/Thomson Pharma Partnering:** Links back to records on the IDdb/Thomson Pharma Partnering site were fixed in 3.3.12 (3/6/2009) but changed format again in March 2010.
- Added support for EnCompassPAT from the Ei EnCompass website in Version 3.3.13 (5/12/09).

## New export options

- **HTML Export to Word and Excel** - Export Options: HTML Export Options panel is available when exporting to Word or Excel, allowing you to specify style sheets and other options.
- Links to records on publisher websites (“Link” under row number) are an **option** as of 3.3.5 (6 Mar 08).

## Editing and viewing charts

- **Chart titles automatically generated from import file name:** The name of the file you import will be used as the default chart title, rather than “Untitled.”
- **Color highlighting:** you can highlight the background of cells and rows using a pastel color (initially yellow), using Text | Highlight Cell or Text | Highlight Row.
- **Truncation:** You can now set text truncation preferences under Options | Truncate text in cells. Settings apply when you create new charts, not to existing charts. Truncation behavior (especially for claims) has also been improved.
- **View | Rows panel** is now larger and shows the row list starting with the current row. When you make changes on the View | Rows, View | Columns and View | Apply Template panels, the chart will maintain your row position rather than jumping to the top of the chart.
- **Moving Rows:** A new Edit | Move Rows command allows you to move a row (or rows) within the chart, to the top, bottom, or to a specific position in the chart.

## Subscribe to Release Announcements

- You can now subscribe to announcements of new releases, via links on each download page. Whenever we publish a new release, subscribers will receive an email with information on the changes in the release and a link back to the BizInt website to download the software.
- **RSS Feeds:** You can also subscribe to RSS 2.0 feeds for each product. You may subscribe to these feeds on our home page, the customer download pages, and on each Latest Release page.

## Version 4.0 Alpha software

- Version 4.0 Alpha #2 offers the ability to create “Reference Rows”—a single row combining information from different sources. More information can be found at: <http://www.bizcharts.com/events/version4>

## Questions or suggestions?

Please contact us at:

phone 1.714.289.1000 (8am – 5pm Pacific/California time)
